

OmegaPS

Description:

OmegaPS Logistic Support Analysis Record (LSAR) is an Oracle database compliant to Def Stan 00-60 issues 1 to 4 and Mil Std 1388-2B. It provides a complete system for the generation and capture of Logistics Support Analysis (LSA) data.

This course is a comprehensive guide to OmegaPS, it explains the features, functions, menus and shortcuts available to maximise the usability of this software. Through a series of 10 practical exercises the course guides delegates through the creation, security administration, tailoring, population and export of a project.

Aim:

To provide the knowledge to use and manage OmegaPS.

Duration:

2 days.

Pre-Requisites:

An understanding of the LSA process and the LSAR Relational Tables.

Designed For:

LSA Engineers and LSAR Managers using OmegaPS.

Course Content:

The course covers the following topics:

- Overview of OmegaPS installation and versions
- Security administration of users, teams and logins and projects
- Establishing application and project privileges
- Creating new projects and Data Element Definition (DED) tailoring
- Uploading and downloading flat file data sets and change only files
- Creating and working with LCN indentured structures in Structure Manager
- Working with Alternative Logistic Codes (ALC) and Useable on Codes (UOC)
- Population of common data tables
- Advanced navigation and application utilities
- Producing standard reports
