

## **OmegaPS Database Administrator (DBA) Basics**

### **Description:**

OmegaPS is an Oracle database and as such a certain amount of Oracle knowledge is required to administer it effectively. Very few OmegaPS users will have the necessary expertise in house and formal Oracle training is to a far greater depth than required and not cost effective.

This course draws on the full spectrum of Oracle knowledge and distils it down into the specific skills you will need to administer, manage and upgrade your LSAR. The course assumes no prior Oracle knowledge and focuses exclusively on the needs of the OmegaPS user.

### **Aim:**

To provide sufficient Oracle knowledge to administer OmegaPS installations.

### **Duration:**

2 Days.

### **Pre-Requisites:**

OmegaPS Course.

### **Designed For:**

LSAR Managers.

### **Course Content:**

The course covers the following topics:

- Creating new instances
- Using Oracle's Database Configuration Assistant
- Exports and Imports of the O2B schema
- Dropping the user and recreating it
- What a parfile is and how to use it
- Creating new users
- How to do an OmegaPS upgrade
- Using Oracle Enterprise Manager (OEM)
